Dexm Blockchain

The next generation dApp platform

Making smart contracts sucks.
Using smart contracts sucks.

We're fixing that.

- A **stable** toolchain for building **contracts**

- An **easy** to use **app**

- **Great tooling** to code on the blockchain

- **dApps** compatible with **standard browsers**

How Dexm works

Developers write **contracts** and deploys them on blockchain, instead of a backend
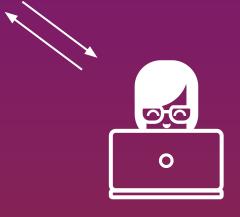

User interacts with the contracts from their **browser**, as if it was a normal website

Blockchain

Developer

User

Performance

Ethereum: 15 tps
NEO: 33 tps
EOS: 133 tps
Visa: 2000 tps
Dexm: 5500 tps 🎉

How we did it:

- **Sharding** *(chain segmentation)*

- **Segmented Networking** *(fast broadcasts)*

- **Khronos consensus** *(proof of stake)*
